DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Claim 13 is generic to a plurality of patentably distinct groups as host organisms for an expression cassette. Applicant must choose 1 organism for the present invention from (bacteria or yeasts or fungi or nonhuman animal organisms or plant organisms). This is not to be construed as an election of species, but a restriction requirement, in which only one organism may be chosen.

The claims are generic to a plurality of nucleotide sequences, each of which constitute a patentably distinct invention. In particular, the promoter sequence must be selected from SEQ ID NO:1 or 2 or 3. Distinctly different DNA sequences are structurally distinct chemical compounds and are deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Art Unit: 1638

Applicant is required to elect a Group above representing a single nucleotide sequence. Electing a sequence is not to be construed as a requirement for an election of species, since each nucleotide sequence is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.

Due to the breadth of the claims wherein promoters that are "functionally equivalent" are also claimed, the technical feature linking the Groups is a promoter sequence. However, this feature is not special as it does not constitute an advance over the prior art. Conrad et al (US Patent 6403371) disclose a seed-specific promoter from *Vicia faba* having a length of at least 100 base pairs and considered to have "essentially" the same promoter "activity" of the promoter of SEQ ID NO: 1.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship

Art Unit: 1638

must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
